

- **Title of the project**

**Water Awareness for future generation**

- **Problem it solves**

We discover that the consumption of water increasing with a huge percentage nowadays. That will affect us negatively in the future and the amount of water will shrinking. So, we are seeking to reduce the consumption of water by focusing on spread the awareness among children (the future makers)

- **Target group**

Children ( grade one to grade three).

- **How we will make children aware about water :**

We will prepare activities for them. These activities are:

- 1- explain to them how people in the past used to bring water for daily usage and make them try to do like them by a game. This activity will make them understand how we are now in a blessing and how important the water is.
- 2- explain to them the water cycle and make them color it to understand each part of the water cycle.
- 3- provide to them pictures and allow them to differentiate between the right and wrong behavior.
- 4- let them express what they understand about the importance of water by drawing

- **Specific goals it will achieve**

- 1- Make children have the ability to critical analysis and problem solving.
- 2- children will be aware how they consume water properly.
- 3- Make children feel about the value of water. and the impact of the water in our community, environment and health.

- **Impact on community**

**When children learn about something, they like to share it with all people around them, especially their family and friends. This action will make the awareness easily and faster spread.**

**Group members:**

1. Aljohara noor
2. Huda saleh
3. Sawsan hamdan
